EDUCATION

Berea College

Bachelor of Arts in Computer Science, Minor in Business

Berea, KY

Expected May 2027

Relevant Coursework:

Software Design & Implementation, Data Structures & Algorithms, Discrete Math

EXPERIENCE

Information Technology Support Specialist

Aug 2024 – Present

Berea, KY

- Assisted in the installation, configuration, and maintenance of operating systems, network components, and software applications to ensure optimal performance and security.
- Collaborated with cross-functional IT teams to troubleshoot complex technical challenges, improving system reliability and user satisfaction.
- Delivered comprehensive technical support by diagnosing and resolving hardware, software, and network issues, reducing system downtime and enhancing user productivity.

PROJECTS

Sports Betting Analytics Platform | *Python, FastAPI, scikit-learn, pandas*

April 2026 – Present

- Built an end-to-end, multi-sport analytics pipeline (MLB, WNBA, soccer) that ingests player game logs and live sportsbook odds from four external APIs and serves a FastAPI web app publishing a daily ranked board of value bets.
- Engineered a probability model that shrinks per-player historical rates toward de-vigged market prices, with a Wilson score confidence-interval calibration layer that filters out markets falling below a statistical accuracy floor.
- Enforced walk-forward, out-of-sample backtesting as a release gate and graded every published slate against an immutable, publish-time ledger to prevent hindsight bias, achieving a 192–47 (80.3%) record across 20 slates.

BYOB C2 Web GUI | *Python, Flask, Docker, VirtualBox*

April 2026 – Present

- Deployed and debugged a command-and-control web application, resolving outdated Flask/Werkzeug dependency conflicts to restore full functionality.
- Configured cross-VM networking using VirtualBox port forwarding to establish a successful reverse TCP shell connection between a Windows target and Ubuntu C2 server.
- Generated and deployed a custom Python-based payload, configuring C2 host and port settings to enable successful bot registration and session tracking through the web dashboard.

Study Assistant Robot | *Python*

August 2025 – Present

- Created a command-line “Study Assistant Bot” that quizzes users with random questions from a preloaded set of topics, tracking scores and progress over time.
- Applied object-oriented programming principles to manage question sets, scoring logic, and user interactions.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, HTML/CSS

Developer Tools: Git, Gitlab, Google Cloud Platform, VS Code, Visual Studio, PyCharm

Certifications: Dell Technologies Professional Certification
